WORK EXPERIENCE

INEURON | Fullstack Developer Intern   Bangalore, India | Dec 2022 – Apr 2023

- Developed multiple mini apps using **ReactJs, Express, NodeJS** that helps to understand intricasies of Javascript and operations under the hood.
- Writing technical blogs every week on **Javascript** and **ReactJS**.
- Developed **REST APIS** and integrated them with the client, learnt building auth using **JWT token** and other practices.

TATA CONSULTANCY SERVICES | Software Engineer   Bangalore, India | Jan 2021 – Oct 2022

- Part of a team which is responsible for developing a Digital Piggy Bank application which was an in house project that lets children have a virtual banking experience where parents can reward them.
- Developing dynamic and mobile responsive web pages using **HTML, Materialize CSS, ES6 Javascript, React Js** . Building reusable modules that can be used throughout the application. Discussing with the back end team for incoming response of the developed **REST APIs** and integrating them in the app to fetch and display dynamic data on front end.
- Written code in an environment that made use of Dev Ops and CI/CD pipeline structure. Was part of code-review/peer-review and unit testing of various modules and then deploying the build to production server.

PROJECTS

WEBCAM GALLERY ⬈   HTML, CSS, Javascript, IndexDB

- A webcam app that allows users to record video, capture images using the front camera of user's device.
- Captured videos and pics can be viewed in the gallery page and allowed to download or delete for the users.

GAMEBAZAAR ⬈   TypeScript, ReactJs, ChakraUI, ReactQuery, Zustand

- GameBazaar is a video game discovery application that helps you find new and interesting games to play.
- With GameBazaar, you can search for games by the platforms that a particular game is available on to play, by a genre or sort them by certain categories.
- The app uses caching to provide great user experience. This is done by making use of **React-Query** and **Zustand** for global state management.

CRYPTO TRACKER ⬈   JavaScript, ReactJs, MaterialUI, ChartJs, Firebase

- The app is using **CoinGecko** API data that allows users to check the prices of crypto currencies, track them and also add to their watchlist.
- Using **Firebase Firestore** database the app is keeping track of the assets in user's watchlist and **Firebase Auth** for user authentication.
- Users can track the historical data of different assets to analyze them.

SKILLS
